

# Movie Master Collection

Saturday, 24 May 2008

Movie Master Collection Vista Edition is a free collection of the best tools for playing, creating DVD/Video CD, converting movies, making DVD backups, or even creating you're own productions. Includes codecs that allow almost any video file to play on Windows. All software on this CD is free or open source. I use these tools on XP, 2003, and Vista Premium - 32 bit.64bit may be found on the authors sites, but at present I am only including 32bit in this archive.

The current archive is 123mb and is in tar gzip format. Please note that I do not condone the distribution or sale of stolen copyright material, be responsible.

Updated May 2009

Download the collection

or get them yourself  
(\* = not included in the above archive)
